Question

How can I schedule a trace to pause or stop automatically?

Solution

Adding the Pause Trace Alert parameter to PingPlotter 5

You can install this alert parameter by:

   1.
Install PingPlotter as a service. (If already installed as a service Stop the PingPlotter 5 service at this time: Win + R > Search "Services.msc" > PingPlotter 5 Service > Stop)

   •
Download and Unzip the file attached at the bottom of this article (Titled AlertAction_PauseTrace.Zip).

   •
Move the AlertAction_PauseTrace folder into the appropriate locations:

   •
Windows: C:\Program Files (x86)\PingPlotter 5\Extensions

   •
MacOS: /Applications/PingPlotter.app/Contents/Resources/Extensions

Restart the PingPlotter service.

Open up the alerts panel to find a new alert called Pause Trace.

NOTE: You can modify this alert to Close the trace instead by changing Collector.Pause() to Collector.Close() on line 15 of pausetrace.js.
